

PulseSecure™ Perimeters offer a professional range of proven electronic perimeter security systems and solutions, for reliable and effective protection of people, property, premises and assets.

PulseSecure™ Perimeters systems are supplied and installed by a network of committed "Accredited Dealers" who are fully trained in the supply, installation, service and maintenance of our systems.

Our range of perimeter security systems includes:

PulseSecure™

"The ultimate perimeter security system"

Unlike other forms of perimeter security systems, PulseSecure™ ACTIVELY - Deters - Defends - Denies and Detects attempts to gain unauthorised access.

FenceSecure™

Fabric mounted intruder detection system.

WallSecure™

Wall mounted detection system to provide early detection of attempts to penetrate the protected walls. Applications include Explosives stores, Bonded warehouses, Electrical stores etc.

SiteSecure™

A security system for use on temporary scaffold erections, hoardings and compound fencing. This system can be used on any temporary site to ensure both the safety of the general public during building works, as well as the security of buildings and plant brought in to complete the contract. Once the site has been finished SiteSecure™ systems can be re-used for the next project.

Warning IR Beams and Barriers

A comprehensive range of active infrared beams and barriers for all forms of external detection including single, dual, quad and multiplexed barrier systems.

Oscar™

Statue and external object protection systems.

ArtSecure™

A comprehensive range of specialist Art Security systems for the protection of paintings, tapestries and objects on display.

FenceSecure™ & WallSecure™

2000 Series "Seismic Intrusion Detection Systems"

- Proven performance
- Cost Effective Detection
- Easy to Install
- Complete range of Installation Accessories
- Ideal for use with CCTV and alarm monitoring systems

FenceSecure™ & WallSecure™ 2000 series

Fabric Mounted Intruder Detection Systems

Expamet fence protected by FenceSecure™ detection system

Palisade fence protected by FenceSecure™ detection system

Logistics compound perimeter fence protected by FenceSecure™ detection systems

High Security Prison fence protected by FenceSecure™ to detect all forms of attack

HARPER CHALICE GROUP LIMITED are leading manufacturers, suppliers and distributors of Electronic Perimeter Security Systems specifically designed to meet growing demands for reliable perimeter systems for the protection of people, property and assets.

Proven performance

PulseSecure™ Perimeter security systems are world renowned. Property and premises protected by PulseSecure™ Perimeter systems range from the protection of private property and commercial risks to the protection of high security risks, Military establishments, Government assets, Communication Centres and Royal Palaces.

Range of systems

Knowing that one system is not suitable for every application, PulseSecure™ Perimeters exclusive and comprehensive range of proven electronic perimeter security systems allow for the tailoring, specification, design and installation of perimeter security systems that meet with exact site, application and security requirements.

State of the art technology

Through continual investment in technology, system development and evaluation, we are committed to retaining our position as a leading manufacturer and supplier of electronic perimeter security systems.

How FenceSecure™ & WallSecure™ work

VibeWire™ piezoelectric sensor cable is applied to the fabric or structure being protected. Audible signals and vibrations generated during an attack are transmitted to the "Seismic Analyser" for analysis and detection.

The analyser detection channels are programmed to detect the signals created by noises and vibrations during intrusion attempts.

VibeWire™ sensor cable

Various models of VibeWire™ are available to cater for different types of application and risk. A full range of fixing accessories is available for fixing VibeWire™ to various forms of fabric and structures.

Setting the standard

Our range of perimeter security systems are continually evaluated by leading authorities, Test Houses and independent appraisals by Home Office and Government Departments. Home Office evaluation reports are available for appropriate authorities.

Quality Assured - Accredited Dealer Network

To ensure that FenceSecure™ & WallSecure™ systems are designed, installed and maintained to the correct standards and specification, every FenceSecure™ & WallSecure™ system is supplied and installed by our network of "PulseSecure™ Perimeters Accredited Dealers"

Commissioning and Certification

Following completion, every FenceSecure™ & WallSecure™ installation is inspected and, providing compliant, a "Certificate of Compliance" is issued. This method of supply ensures that all systems are installed to the highest standards for optimum security and reliability.

FenceSecure™

FenceSecure™ can be used on virtually all types of fencing fabric including chain link, welded mesh and Palisade, and the system has no topographical limitations. However, depending on the fencing type, and to obtain optimum performance, FenceSecure™ is installed and set up to match with the detection characteristics required for the fence type being protected.

It all fits together!

The vast range of FenceSecure™ & WallSecure™ system components and accessories allows for the fast and proficient application of FenceSecure™ & WallSecure™ detection systems, with maximum reliability and efficiency.

All components are manufactured from the highest grade materials and fully tested for efficiency and maximum life expectancy.

Applications

As shown within this brochure, FenceSecure™ and WallSecure™ seismic detection systems can be applied to many varied forms of perimeter fences, walls, structures and roofs. We shall be pleased to advise you on the method, application and accessories for specific application and security requirements.

Proven reliability

FenceSecure™ & WallSecure™ detection systems have a proven track record for the protection of industrial estates; buildings; factories; garages; warehouses; storage compounds; logistics depots; car storage compounds; Military, Government premises and establishments.

Typical WallSecure™ applications

- Warehouses
- Factories
- Stockrooms
- Tobacco stores
- Wine and spirit stores
- Explosive stores
- Showrooms
- Bonded warehouses

Proven track record in stopping crime and losses

Our range of seismic detection systems has an excellent track record in stopping crime and losses across many industries. For bona fide enquiries we can provide details of existing users who will be pleased to confirm the effectiveness and reliability of our detection systems.

Accredited Dealer network

Our specialist range of detection systems are supplied and installed by a network of "PulseSecure™ Perimeters Accredited Dealers". For details of your nearest "Accredited Dealer" please contact us at the address below.

System Compatibility - Alarm monitoring and control

FenceSecure™ & WallSecure™ detection systems operate from 12 to 24v DC power supplies. Zone alarm relays with programmable normally open or closed alarm outputs are standard. The systems can easily be interfaced with all types of CCTV and alarm monitoring systems.

Technical support and training

We provide full technical support, assistance with system surveys, system planning, design, installation training and commissioning.
